

IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

PHASE 7 – PROJECT DOCUMENTATION

7.1 Introduction

Documentation records the project process so that the work can be understood, repeated and demonstrated. The documentation covers the purpose, configuration, implementation steps, testing observations and final outcome.

7.2 Project Configuration Summary

Component	Configuration
Target Table	Employee Test / u_employee_test
Import Set Table	Employee Import / u_employee_import
Transform Map	Sample Spreadsheet Import
Target Fields	Employee ID, Employee Name, Email, Department, Location
Coalesce	Enabled on an identifying field
Dashboard	Employee Analytics Dashboards

7.3 Import Process Documentation

The documented process begins with preparing the spreadsheet, creating the target table and fields, creating the Import Set table, loading the spreadsheet and creating the Transform Map.

7.4 Transformation Documentation

The transformation documentation explains the relationship between the staging table and target table. It also records how fields are mapped and how the Transform action is executed.

7.5 Duplicate Handling Documentation

The Coalesce configuration is documented because it is an important data-integrity feature. It makes repeated employee imports safer by using a matching field to determine whether an existing record should be updated.

7.6 Reports Documentation

Report	Purpose
Employees by Department	Shows the distribution/count of employees by department.
Employees by Location	Shows the distribution/count of employees by location.
Employee List Report	Displays detailed employee records.

7.7 Dashboard Documentation

The Employee Analytics Dashboards dashboard combines the three reports into one centralized view.

7.8 Final Results

- Employee records are successfully imported into the target table.
- Source and target fields are mapped through the Transform Map.
- Coalesce is used for duplicate-aware processing.
- New and existing records can be distinguished during repeated imports.
- Department and location reports provide summarized information.
- An employee list provides detailed record information.
- The reports are consolidated in the Employee Analytics Dashboards dashboard.

7.9 Project Benefits

- Reduces manual data entry.
- Supports structured data migration.
- Improves consistency of employee information.
- Helps prevent unnecessary duplicate records.
- Provides quick access to employee summaries.
- Provides a centralized dashboard for monitoring.
