

IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

PHASE 8 – PROJECT DEMONSTRATION

8.1 Demonstration Introduction

The demonstration phase presents the completed project from beginning to end. The objective is to demonstrate how employee data from a spreadsheet is processed through ServiceNow and converted into validated employee records and visual reports.

8.2 Demonstration Sequence

1. Show the prepared employee spreadsheet.
2. Open ServiceNow and display the Employee Test table.
3. Show the Employee ID, Employee Name, Email, Department, and Location fields.
4. Open Load Data and display the Employee Import staging table.
5. Show the imported spreadsheet data.
6. Open the Sample Spreadsheet Import Transform Map.
7. Show the source table and target table.
8. Show the configured field mappings.
9. Execute or display the completed transformation.
10. Open the Employee Test table and verify the imported records.
11. Show the Coalesce setting used to identify existing records.
12. Import the test spreadsheet containing existing and new employee records.
13. Open Transform History and show the inserted, updated, or ignored results.
14. Open the Employees by Department report.
15. Open the Employees by Location report.
16. Open the Employee List Report.
17. Open the Employee Analytics Dashboards dashboard.

18. Show all three reports on the dashboard.
19. Explain the final result and data-integrity benefits.

8.3 Conclusion

This project successfully demonstrates an employee data management workflow using ServiceNow Import Sets and Transform Maps. The process begins with spreadsheet preparation and continues through staging, field mapping, transformation, and validation. Coalesce provides an important data-integrity feature by helping identify existing employee records during repeated imports.

The project is further extended with reports and a dashboard, providing a centralized view of employee information and import-related results.

8.4 Final Project Outcome

The final outcome is a complete ServiceNow-based employee data import and reporting solution that demonstrates the practical use of Import Sets, Transform Maps, Coalesce, Reports, and Dashboards.
